

Map 37 Syrtica

Compiled by D.J. Mattingly, 1996

Introduction

The region of Syrtica is one of the least hospitable coastal stretches anywhere in the Mediterranean basin. With the exception of the immediate hinterland of Macomades (modern Sirte), much of the route round the Syrtis Maior gulf—between Cephalae Promunturium (Cape Misurata) and Berenice (Benghazi)—runs through a barren-looking and poorly watered landscape. Early exploration by Beechey (1828) and Cerrata (1933) was supplemented in dramatic fashion by Goodchild's study (1976, 145–94) undertaken specifically for TIR Lepcis and TIR Cyrene. Many of his identifications in this sector still look secure, though Stucchi (1975) and Purcaro Pagano (1976) in particular have suggested further alternatives.

The Sebkha Tauorgha, a great salt-flat and seasonal lake into which the pre-desert wadi systems of Sofeggan and Zemzem disgorged, dominates the western side of the Syrtis (Map 35). Most of the road stations mentioned by the ancient itineraries in this sector were minor installations, and almost none can be securely identified on the ground (Rebuffat 1973; Mattingly 1994). The south-western sector of the Syrtic coastline is the best watered, and was served in antiquity by a series of good anchorages (Aspis, Macomades, Charax/(I)scina). Some of the larger coastal settlements served as *civitas* centers or attained *municipium* status (Gascou 1972; Lepelley 1979; 1981; Mattingly 1994). In modern times this region has been noted for the quality of its pasture. The typical farmsteads here in the Roman period, extending up to 31 miles into the interior along the wadis, likewise suggest a high level of stock-raising (for recent field survey, see Rebuffat 1988; Reddé 1988; work by Laronde and Longerstay is in progress). There were also numerous small agglomerations of such farmsteads (hamlets or villages) in the pre-desert wadis, clustered around the wells and cisterns. In addition, along the coastal plain itself on either side of Macomades, there were a number of more substantial villas, several with evidence of olive- or wine-presses (Reddé 1988, 77). With the exception of a dense group at Tmed Hassan (Praetorium) and a few elsewhere in the coastal plain, there were few fortified farms (*gsur*) here in comparison with the Tripolitanian pre-desert zone to the west.

The south-eastern coastline becomes increasingly barren after Charax/(I)scina (Medina Sultan). For the most part the main road seems to have kept very close to the coast, making use of a series of wells in a narrow corridor. The short inland diversion to the town of Diggida (Wadi el-Hariga) forms a rare exception. There appear to have been only a handful of anchorages and a series of very minor road stations along this section of the coast, although new fieldwork by Laronde has shown that the wadis inland were more fully exploited than Goodchild had believed. On the eastern side of the gulf, beyond Kozynthion Akron (Marsa Brega), dispersed ancient settlements increase in number, and fortified farms are again strongly represented among rural estate centers. Water resources and pasturage are better here than in the southern sector of the Gulf.

As Goodchild observed (1976, 149; cf. Laronde 1987), comparison between the overland itineraries and the maritime listings (notably StadMM) suggests that some of the major sites were known in the latter sources by their Greek names and in the former by the Latin/Phoenician/Libyan equivalents current in the Roman period (for example, Euphranta/Macomades; Charax/(I)scina). With the exception of the descriptive names of minor way stations (Ad Palmam, Ad Puteum, Ad Turrem, etc.), the majority of the settlement names current in the Roman period were of Libyan or Phoenician derivation (Bisi 1977).

The exact course of the Roman roads around the Syrtic gulf is very uncertain, but it seems probable that for most of the way from Macomades eastwards to the provincial boundary at Arae Philaenorum, ItAnt and TabPeut document an essentially similar path, normally very close to the coast (Tissot 1888; Goodchild 1948; 1971; Purcaro Pagano 1976). Only in the vicinity of the town of Diggida did the roads have significant inland detours. Beyond the foot of the Gulf, the route divided, with one road continuing along the coastal plain and the other diverting inland towards an important road junction at Corniclanum (Agedabia; see Map 38). Although the exact location of most of

the places recorded along these roads is thus also conjectural, I have made tentative suggestions for many. The hollow symbols and question marks used emphasize the need for caution concerning the reliability of the specific attributions, while allowing the general shape of the limited permanent settlement here to be appreciated.

The east-west coastal route is mirrored in part by interior desert routes linking the oases of the northern Sahara (Rebuffat 1970; 1970a), notably from Augila (Map 38 C4), via Marada, Zella (an important oasis lying just beyond the southern margin of the map), and Tagrifet with the oases of the Giofra (Waddan, Hun, Socna) and Fezzan (Sabae, Garama and others; see Map 36). Desert tracks also link these oases with the Syrtic coast at various points; these south-north tracks have traditionally been important transhumance routes for the movement of flocks between the Syrtic pastures and the oases. There was probably always a close interrelationship between the coastal Macae and Nasamones sub-tribes and those of the interior (Bates 1914; Desanges 1978; 1980). In Late Antiquity, the oases (and indeed much of Syrtica) appear to have been dominated by new confederations of tribes, the Austuriani, later known also as the Laguant or Leuathae (Roques 1987; Mattingly 1994, 173-76).
